

The Original Ergonomic Joystick with Fingertip Control

STANDARD AND HEAVY-DUTY MODELS

These industry-original joysticks are designed to meet machine operators' demands for an ergonomic grip with low operating effort and a long life. The WK300 is equipped with an ABS composite base optimized for agriculture applications; the WK350 has a metal base for use in the roughest environments.

CHOOSE UP TO 5 FINGERTIP CONTROLS

The ergonomic handgrip allows up to five electric switches located in optimal positions--three on the front and two on the side--to allow the operator to easily activate their secondary functions without any interruption of the joystick position. Switches are on an easily interchangeable plate.

CUSTOMIZE YOUR HANDGRIP

On top of the handgrip and in clear view for the operator, a transparent cover houses the Nimco logo or a front end loader movement diagram as standard. The customer has the option to integrate their specific image or application diagram.
